

**KURZPROTOKOLL**  
**BMX-Rad**

<b>Öffentlicher Titel</b>	Studie zur präoperativen Radiochirurgie als Erstlinientherapie bei Patienten mit Hirnmetastasen
<b>Wissenschaftl. Titel</b>	Immunomodulatory effects of preoperative radiosurgery in patients with brain metastases
<b>Kurztitel</b>	BMX-Rad
<b>Studienart</b>	prospektiv, offen/unverblindet, einarmig, nicht-interventionelle Studie, Investigator Initiated Trial (IIT)
<b>Studienphase</b>	nicht zutreffend
<b>Erkrankung</b>	Nervensystem: sonstige
<b>Einschlusskriterien</b>	<ul style="list-style-type: none"><li>- age &gt;= 18 years</li><li>- suspicion of brain metastases from solid tumors as assessed by cerebral imaging (MRI)</li><li>- interdisciplinary recommendation for preoperative stereotactic radiosurgery (SRS)</li><li>- IT and TT treatment following preoperative SRS and surgery is considered</li><li>- Karnofsky performance status &gt;= 50, ECOG &lt;= 2</li><li>- INR 1,7, Quick &gt; 50%, thrombocytes &gt; 50000/l</li><li>- disorder of coagulation</li><li>- treatment with anticoagulant medications</li><li>- other medical conditions that might increase the risk of bleeding complications</li><li>- pregnancy</li><li>- dementia or other clinically relevant alterations of the mental status which could impair the</li><li>- ability to understand the informed consent of the study</li><li>- major contraindications to MRI scanning (e.g. presence of implanted MRI-incompatible cardiac devices)</li><li>- major contraindications to lumbar puncture (e.g. local inflammation, increased intracerebral pressure, cardiorespiratory disease that does not allow adequate positioning of the participant for lumbar puncture)</li></ul>
<b>Ausschlusskriterien</b>	
<b>Alter</b>	18 Jahre und älter
